#### **SECTION E**

36. Manpreet Kaur is the national record holder for women in the shot-put discipline. Her throw of

18.86m at the Asian Grand Prix in 2017 is the maximum distance for an Indian female athlete.

Keeping her as a role model, Sanjitha is determined to earn gold in Olympics one day.

Initially her throw reached 7.56m only. Being an athlete in school, she regularly practiced both in the mornings and in the evenings and was able to improve the distance by 9cm every week.

During the special camp for 15 days, she started with 40 throws and every day kept increasing the number of throws by 12 to achieve this remarkable progress.

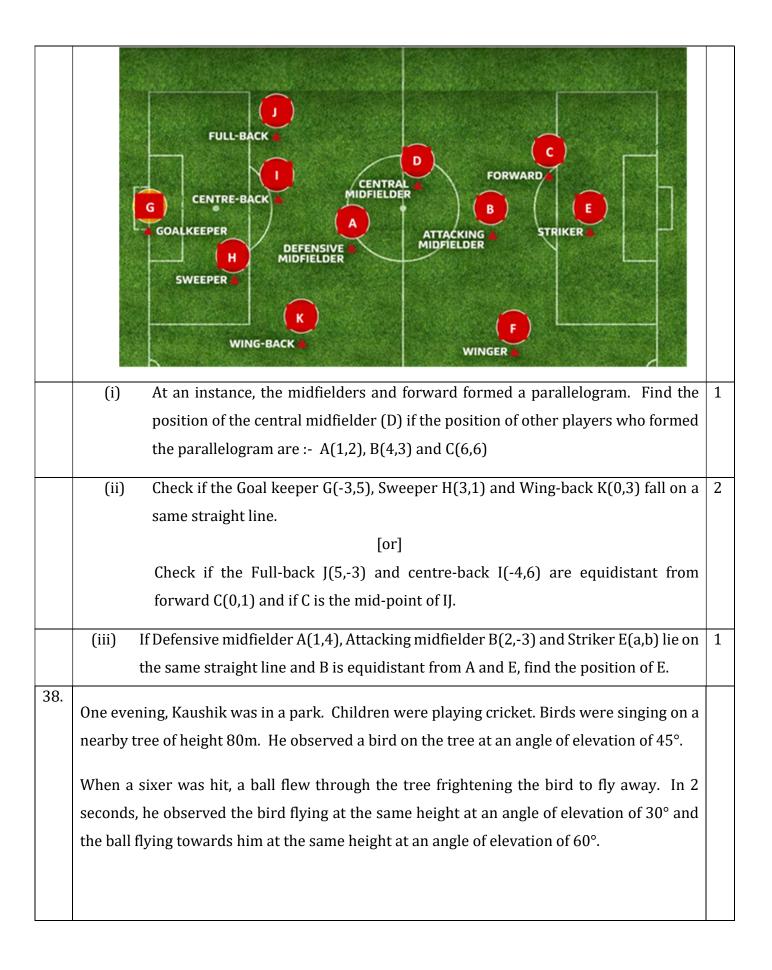

(1)	How many throws Sanjitha practiced on 11 <sup>th</sup> day of the camp?	1
(ii)	What would be Sanjitha's throw distance at the end of 6 weeks?	2

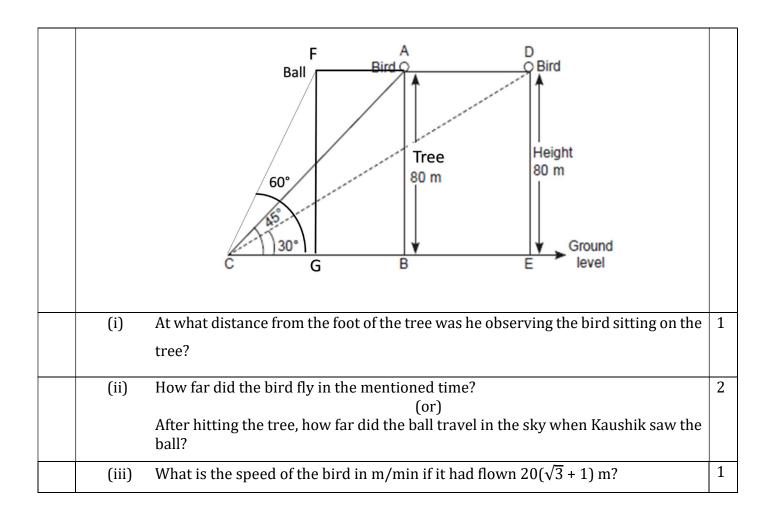

(or)
When will she be able to achieve a throw of 11.16 m?

(iii) How many throws did she do during the entire camp of 15 days?

37. Tharunya was thrilled to know that the football tournament is fixed with a monthly timeframe from 20th July to 20th August 2023 and for the first time in the FIFA Women's World Cup's history, two nations host in 10 venues. Her father felt that the game can be better understood if the position of players is represented as points on a coordinate plane.

20.	(c) Assertion (A) is true but reason (R) is false.	1
	SECTION B	
	Section B consists of 5 questions of 2 marks each.	
21.	Let us assume, to the contrary, that $\sqrt{2}$ is rational.	
	So, we can find integers $a$ and $b$ such that $\sqrt{2} = \frac{a}{b}$ where $a$ and $b$ are coprime.	1/2
	b b	
	So, b $\sqrt{2} = a$ . Squaring both sides	
	Squaring both sides, we get $2b^2 = a^2$ .	
	Therefore, 2 divides $a^2$ and so 2 divides a.	1/2
	So, we can write a = 2c for some integer c.	
	Substituting for a, we get $2b^2 = 4c^2$ , that is, $b^2 = 2c^2$ .	1/2
	This means that 2 divides b <sup>2</sup> , and so 2 divides b	72
	Therefore, a and b have at least 2 as a common factor.	
	But this contradicts the fact that a and b have no common factors other than 1.	1/2
	This contradiction has arisen because of our incorrect assumption that $\sqrt{2}$ is rational.	, 2
	So, we conclude that $\sqrt{2}$ is irrational.

	So, the original number = $10x + y$	
	When the digits are reversed, x becomes the unit's digit and y becomes the ten's
