SECTION: A (Solution of MCQs of 1 Mark each)

Q		HINTS/SOLUTION
no.	ANS	
1.	(C)	The required area is given by $\left \int_{1}^{4} (\sqrt{x}) dx \right = \left[\frac{\frac{3}{2}}{\frac{3}{2}} \right]_{1}^{4} = \left \frac{2}{3} (8-1) \right = \frac{14}{3} \text{ squnits.}$
2.	(A)	Systematic Sampling as it is a type of probability sampling while others are types of non-probability sampling. (When selection of objects from the population is random, then objects of the population have an equal probability i.e., has a known non-zero equal chance of selection. In other words, in probability sampling, sample units are selected at random.)
3.	(A)	The cost function for a manufacturer is given by $C(x) = \frac{x^3}{3} - x^2 + 2x$ (in rupees). The marginal cost function is given by $MC(x) = \frac{dC}{dx} = x^2 - 2x + 2$ $MC'(x) = 2x - 2$ So, the marginal cost decreases from 0 to 1 and then increases onwards
4.	(C)	Being a polynomial function $f(x)$ is differentiable $\forall x \in \left(-2, \frac{9}{2}\right)$ $f'(x) = 4 - x .$ $f'(x) = 4 - x = 0 \Rightarrow x = 4 .$ For the function $f(x) = 4x - \frac{1}{2}x^2$ in the interval $\left[-2, \frac{9}{2}\right]$, the end points are $x = -2 & x = \frac{9}{2}$ $\therefore \text{The absolute minimum value of the function } f(x) = 4x - \frac{1}{2}x^2 \text{ in the interval } \left[-2, \frac{9}{2}\right] \text{ is}$ $\min\left\{f\left(-2\right), f\left(4\right), f\left(\frac{9}{2}\right)\right\} = \min\left\{-10, 8, \frac{63}{8}\right\} = -10.$

	(D)	Here $n = 2025$				
		: Degree of freedon	n = 2025 - 1 = 2024.			
6.	(A)	-5 - Y' x =		X $\stackrel{\longrightarrow}{30} X$ $\stackrel{\longrightarrow}{30} 3 \text{ may be remove}$	ed so that the feasible	regio
7.	(0)					
	(C)	Number on the	x_i	p_i	$p_i x_i$	
		die				
		1	1	$\frac{1}{6}$	$\frac{1}{6}$	
		2	-1	1	1	
			1	$\frac{1}{6}$	$-\frac{1}{6}$	
		3	3	1	$\frac{3}{6}$	
				6	6	
		4	-2	$\frac{1}{6}$	$-\frac{2}{\epsilon}$	
				- 6	$-\frac{1}{6}$	
		5	-2 5		$-\frac{1}{6}$	
		5	5		$-\frac{6}{6}$ $\frac{5}{6}$	
		5	5 -3		- 6 5 6 -3	
8.	(C)	5	5 -3 $= \sum p_i x_i = \frac{3}{6} = \frac{1}{2}$ $= \frac{1200000 - 300000}{1200000}$	6 1/6 1/6 1/6	- 6 5 6 -3	
8.	(C)	$\frac{5}{6}$ Expected gain = $E(X)$ Annual depreciation	5 -3 $= \sum p_i x_i = \frac{3}{6} = \frac{1}{2}$ $= \frac{1200000 - 300000}{3}$	6 1/6 1/6 1/6	- 6 5 6 -3	0000.

	l	
		$\frac{dy}{dx} = 6 - 2x$
		$\Rightarrow \frac{dy}{dx}_{x=3} = 6 - 2 \times 3 = 0.$
10.	(B)	This is a binomial distribution with $n = 80, p = 5\% = \frac{1}{20}$. If X is the binomial random
		variable for the number of defectives then X is $B\left(80,\frac{1}{20}\right)$.
		So, $\sigma^2 = npq = 80 \times \frac{1}{20} \times \frac{19}{20} = \frac{19}{5}$.
11.	(C)	$375 \text{ hours} = (24 \times 15 + 15) \text{ hours}$
		$\therefore 375 \pmod{24} = 15$
		Therefore, it will be 9 am after 375 hours.
12.	(B)	$x \in (-1,3)-\{0\} \Rightarrow x \in (-1,0)\cup(0,3)$
		When $x \in (-1,0)$ then $\frac{1}{r} \in (-\infty,-1)$ (i)
		When $x \in (0,3)$ then $\frac{1}{x} \in (\frac{1}{3},\infty)$ (ii)
		From (i) & (ii) , we have $\frac{1}{x} \in (-\infty, -1) \cup (\frac{1}{3}, \infty)$.
13.	(C)	Secular trend variations are considered as long-term variation, attributable to factor
		such as population change, technological progress and large –scale shifts in consumer
		tastes.
14.	(B)	$R = 7800. i = \frac{4}{200} = 0.02$
		$P = \frac{R}{i} = \frac{800}{0.02} = \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ $
15.	(A)	The slope of L_1 at any arbitrary point (x,y) is $\frac{dy}{dx}$.
		The slope of L_2 that connects the point (x,y) to the origin is $\frac{y-0}{x-0} = \frac{y}{x}$
		Now,
		$\frac{dy}{dy} = \frac{1}{2} \times \frac{y}{y}$
		$\frac{dy}{dx} = \frac{1}{3} \times \frac{y}{x}$
		$\therefore \frac{dy}{dx} = \frac{y}{3x}.$

16. (A)
$$adj A = 2A^{-1} \Rightarrow A^{-1} = \frac{1}{2}(adj A)$$

$$\therefore |A| = 2$$

$$Now, |3AA^{T}| = 3^{3} \times |A|^{2} = 108$$
17. (B) We have, $P = \begin{bmatrix} 3 & 4 \\ -1 & 2 \\ 0 & 1 \end{bmatrix} & Q^{T} = \begin{bmatrix} -1 & 2 & 1 \\ 1 & 2 & 3 \end{bmatrix} \Rightarrow Q = \begin{bmatrix} -1 & 1 \\ 2 & 2 \\ 1 & 3 \end{bmatrix}$

$$So, P - Q = \begin{bmatrix} 3 & 4 \\ -1 & 2 \\ 0 & 1 \end{bmatrix} - \begin{bmatrix} -1 & 1 \\ 2 & 2 \\ 1 & 3 \end{bmatrix} = \begin{bmatrix} 4 & 3 \\ -3 & 0 \\ -1 & -2 \end{bmatrix}.$$
18. (B) order is 2 and degree is 1.

19. (A) Both (A) and (R) are true and (R) is the correct explanation of (A).

20. (C) (A) is true but (R) is false.

Section –B

[This section comprises of solution of very short answer type questions (VSA) of 2 marks each]

21(a).	C.P of a unit of cheaper(C) Water (₹0 per litre) Mean Price (M) Mixture	
	Cheaper Quantity (750 per litre) $Cheaper Quantity$ $(D-M) = (60-50) = 10$ $(M-C) = (50-0) = 50$	
	C.P of 1 litre of water = ₹ 0	
	C.P of 1 litre of milk = ₹ 60	1
	Mean Price = ₹ 50	
	Therefore, ratio of water and milk = $\frac{60-50}{50-0} = \frac{10}{50} = \frac{1}{5}$ or 1: 5	1
	OR	
21(b).	Time taken to drain full tank = x hours i.e., the time rate of drain the tank = $\frac{1}{x}$ units	
	per hour	

	Time taken to fill the full tank is 2 hours i.e., the time rate of filling the tank = $\frac{1}{2}$ units	
	per hour	
	Again, with the leakage, the pipe takes $2\frac{1}{3} = \frac{7}{3}$ hours to fill the full tank.	
	The rate of filling the tank along with the leakage will be $=\frac{3}{7}$ units per hour.	1/2
	Now, according to question,	
	$\left(\frac{1}{2}\right) - \left(\frac{1}{x}\right) = \left(\frac{3}{7}\right)$	1
	Solving, we get $x = 14$	1/2
	Hence, 14 hours are required to drain the full tank.	
22.	In a 200m race, when A covers 200m	
	then B covers $(200-18)=182m$	
	and C covers $(200-31)=169m$	
	$\Rightarrow A : C = 200 : 169$	1/2
	$\frac{B}{C} = \frac{A}{C} \times \frac{B}{A} = \frac{200}{169} \times \frac{182}{200} = \frac{182}{169}$	1/2
	When B covers $182m$ then C covers $169m$	
	When B covers $350m$ then C covers $\frac{169}{182} \times 350 = 325m$	1/2
	Therefore, B can give a start of $(350-325)=25m$ to C.	1/2
23.	Let the total distance be d km and the speed of boat in still water be x km/h	
	Speed of stream = 5 km/h	
	Speed upstream = $(x - 5)$ km/h	1/2
	Speed downstream = $(x + 5)$ km/h	1/2
	According to question, $\frac{d}{x-5} = 3 \times \frac{d}{x+5}$	1/2
	Solving, we get $x = 10$	1/2
	Hence, the speed of boat in still water is 10 km/h	
24(a).	Let <i>X</i> be the random variable denoting the number of workers who catch the	
	disease.	
<u> </u>	I .	

	20 1 4	1/2
	Given, $p = \frac{20}{100} = \frac{1}{5} \Rightarrow q = \frac{4}{5}$ and $n = 6$	
	Now, $P(X = x) = {}^{6}C_{x} \left(\frac{1}{5}\right)^{x} \left(\frac{4}{5}\right)^{6-x}, x = 0,1,,6$	
	So, the required probability that out of six workers 4 or more will catch the disease is	
	$P(X \ge 4) = P(X = 4) + P(X = 5) + P(X = 6)$	
	$= {}^{6}C_{4} \left(\frac{1}{5}\right)^{4} \left(\frac{4}{5}\right)^{2} + {}^{6}C_{5} \left(\frac{1}{5}\right)^{5} \left(\frac{4}{5}\right)^{1} + {}^{6}C_{6} \left(\frac{1}{5}\right)^{6} \left(\frac{4}{5}\right)^{0}$	1
	$=\frac{265}{5^6}$ or 0.017.	1/2
	OR	
24(b).	We have, mean $\mu = 12$ and standard deviation $\sigma = 2$, i.e., $X \sim N(\mu, \sigma^2)$	
	(i) Let <i>X</i> denote the count of the months for which this machine lasts.	
	The probability of an item produced by this machine will last less than 7 months is	
	P(X < 7)	
	For $X = 7$, $Z = \frac{7-12}{2} = -\frac{5}{2}$	1/
		1/2
	Now,	
	$P(X<7) = P\left(Z<-\frac{5}{2}\right) = P\left(Z>\frac{5}{2}\right)$	
	$=1-P\left(Z<\frac{5}{2}\right)=1-0.9938=0.0062$	1/2
	(ii) The probability of an item produced by this machine will last more than 7 months and less than 14 months is $P(7 < X < 14)$	
	For $X = 7$, $Z = \frac{7 - 12}{2} = -\frac{5}{2}$	
	and for $X = 14$, $Z = \frac{14-12}{2} = 1$	1/2
	$P(7 < X < 14) = P(-\frac{5}{2} < Z < 1)$	
	$=P(Z<1)-P(Z<-\frac{5}{2})$	
	= 0.8413 - 0.0062 = 0.8351	1/2
25.	Given, $A^2 = B$	

$\Rightarrow \begin{bmatrix} \alpha & 0 \\ 1 & 1 \end{bmatrix} \begin{bmatrix} \alpha & 0 \\ 1 & 1 \end{bmatrix} = \begin{bmatrix} 1 & 0 \\ 5 & 1 \end{bmatrix}$	
$\Rightarrow \begin{bmatrix} \alpha^2 & 0 \\ \alpha + 1 & 1 \end{bmatrix} = \begin{bmatrix} 1 & 0 \\ 5 & 1 \end{bmatrix}$	1
$\Rightarrow \alpha^2 = 1$ and $\alpha + 1 = 5$.	1/2
Hence, no real value of α exists.	1/2

Section -C

[TI	nis section comprises of solution short answer type questions (SA) of 3 marks eac	h]
26.	$5 \equiv 5 \pmod{7}$	
	$\Rightarrow 5^2 \equiv 25 \pmod{7}$	
	$\Rightarrow 5^2 \equiv 4 \pmod{7}$	1
	$\Rightarrow 5^4 \equiv 4^2 \pmod{7}$	
	$\Rightarrow 5^4 \equiv 2 \pmod{7}$	
	$\Rightarrow 5^{20} \equiv 32 \pmod{7}$	1
	$\Rightarrow 5^{20} \equiv 4 \pmod{7}$	
	$\Rightarrow 5^{60} \equiv 1 \pmod{7}$	
	$\Rightarrow 5^{61} \equiv 5 \pmod{7}$	1
	Hence, the remainder when 5 ⁶¹ is divided by 7 is 5	
27(a).	Given,	
	$n_1 = 10, n_2 = 8, \overline{x_1} = 750, \overline{x_2} = 820, s_1 = 12 \& s_2 = 14$	
	Consider, Null hypothesis \mathbf{H}_0 : Mean life is same for both the batches i.e., $(\mu_1 = \mu_2)$.	
	Alternate hypothesis \mathbf{H}_{α} : Two batches have different mean lives i.e., $(\mu_1 \neq \mu_2)$.	
	Test Statistics,	
	$\mathbf{t} = \frac{\overline{x_1} - \overline{x_2}}{\mathbf{S}} \times \sqrt{\frac{n_1 n_2}{n_1 + n_2}},$	
	Where $S = \sqrt{\frac{(n_1 - 1)s_1^2 + (n_2 - 1)s_2^2}{n_1 + n_2 - 2}}$	
	$\Rightarrow S = \sqrt{\frac{9 \times 144 + 7 \times 196}{10 + 8 - 2}}$	1

		1/
	$=\sqrt{\frac{2668}{16}}=12.91$	1/2
	$\therefore t = \frac{750 - 820}{12.91} \times \sqrt{\frac{10 \times 8}{10 + 8}}$	
	$=\frac{-70}{12.91}\times 2.1081$	4
	= -11.430	1
	Since, calculated value $ t =11.430>$ tabulated value $t_{16}(0.05)=2.120$	
	So, rejected the null hypothesis at 5% level of significance.	1/2
	Hence, the mean life for both the batches is not the same.	
	OR	
27(b).	Here, population mean $(\mu) = 25$	
	Sample mean $(\bar{x}) = \frac{\sum x_i}{n} = \frac{138}{6} = 23$	1/2
	Sample size $(n) = 6$	
	Consider, Null hypothesis $\mathbf{H}_{\scriptscriptstyle{0}}$: There is no significant difference between the sample	
	mean and the population mean i.e., $(\mu_1 = \mu_2)$.	
	Alternate hypothesis \mathbf{H}_{α} : There is no significant difference between the sample mean	
	and the population mean i.e., $(\mu_1 \neq \mu_2)$.	
	Values of $(x_i - \bar{x})^2$ are 1, 9, 49, 9, 9 and 25	
	$\therefore s = \sqrt{\frac{102}{5}} = 4.52$	1
	Now, $t = \frac{\bar{x} - \mu}{\frac{s}{\sqrt{n}}} = \frac{23 - 25}{\frac{4.52}{\sqrt{6}}}$	
	=-1.09	1
	$\Rightarrow t = 1.09$	
	Since, calculated value $ t =10.763<$ tabulated value $t_5(0.01)=4.132$	
	So, the null hypothesis is accepted.	1/2
	Hence, the manufacturer's claim is valid at 1% level of significance.	
28.	Given, mean = $\lambda = 3.2$	1/2
	Let X be the number of bicycle riders which use the cycle track.	

	Required probability = $P(X \le 2) = P(X = 0) + P(X = 1) + P(X = 2)$	
	$= \frac{e^{-3.2}(3.2)^0}{0!} + \frac{e^{-3.2}(3.2)^1}{1!} + \frac{e^{-3.2}(3.2)^2}{2!}$	1½
	$= e^{-3.2}(1+3.2+5.12)$	
	$= 0.041 \times 9.32 = 0.618$	1/2
	Also, mean expectation = variance of $X = \lambda = 3.2$	1/2
29.	Here, Initial investment value $(IV) = ₹5000$	1/2
	Final investment value $(FV) = ₹10500$	1/2
	No of period $(n) = 3$ (starting from 2021 to 2023)	
	$\Rightarrow r = \left(\frac{FV}{IV}\right)^{\frac{1}{n}} - 1 = \left(\frac{10500}{5000}\right)^{\frac{1}{3}} - 1$	1
	=1.2805-1=0.2805	1/2
	CAGR = 28.05%	1/2
30.	Let the number of necklaces manufactured be x , and the number of bracelets	
	manufactured be y.	
	According to question,	
	$x + y \le 25$ and	
	$\frac{x}{2} + y \le 14$	
	The profit on one necklace is ₹ 100 and the profit on one bracelet is ₹ 300.	
	Let the profit (the objective function) be \mathbf{Z} , which has to be maximized.	
	Therefore, required LPP is	
	Maximize $Z = 100x + 300y$	1
	Subject to the constraints	4.
	$x+y\leq 25$	1/2
	$\frac{x}{2} + y \le 14$	1
	$x, y \ge 0$	1/2
31(a).	(i) We have, $\sum_{i=1}^{8} P(X=i) = 1$	

$$\Rightarrow p + 2p + 2p + p + 2p + p^2 + 2p^2 + 7p^2 + p = 1$$

$$\Rightarrow 10p^2 + 9p - 1 = 0$$

$$\Rightarrow (10p - 1)(p + 1) = 0$$

$$\Rightarrow p \neq -1$$

$$\therefore p = \frac{1}{10}$$
(ii)
$$\text{Mean, } E(X) = \sum_{i=1}^{8} i P(X = i)$$

$$= 1 \times p + 2 \times p + 3 \times 2p + 4 \times p + 5 \times 2p + 6 \times p^2 + 7 \times 2p^2 + 8 \times (7p^2 + p)$$

$$= 33p + 76p^2$$

$$= \frac{33}{10} + \frac{76}{100} = \frac{203}{50}$$
OR

$$\text{31(b)}.$$
We have, $p = 0.01 = \frac{1}{100} \Rightarrow q = \frac{99}{100}$
Let number of Bernoulli trials be n .

Now, the binomial distribution formula is for any random variable (X) is given by
$$P(X = x) = C_x \left(\frac{1}{100}\right)^x \left(\frac{99}{100}\right)^{n-x}$$
So, the probability of at least one success is
$$P(X \ge 1) = 1 - P(X = 0) = 1 - C_0 \left(\frac{1}{100}\right)^0 \left(\frac{99}{100}\right)^n = 1 - \left(\frac{99}{100}\right)^n$$
According to condition, $P(X \ge 1) \ge 0.5 \Rightarrow 1 - \left(\frac{99}{100}\right)^n \ge 0.5 \Rightarrow \left(\frac{99}{100}\right)^n \le 0.5$

$$\Rightarrow n \log_{10} \frac{99}{100} \le \log_{10} 0.5 \Rightarrow n \ge \frac{\log_{10} 0.5}{\log_{10} 0.99}; \quad \text{(as } \log_{10} 0.99 < 0\text{)}$$

$$[\text{Using } \log_{10} 2 = 0.3010 \text{ and } \log_{10} 99 = 1.9956] \Rightarrow n \ge 68.409 \Rightarrow n = 69 \ [\because n \in \mathbb{N}].$$

33(b).	(i) $s(t) = at^2 + bt + c$; $t \ge 0$	
	Clearly, $(10,16)$, $(20,22)$, $(30,25)$ lie on the curve of $s(t)$. Then, $100a + 10b + c = 16$ 400a + 20b + c = 22	1
	900a + 30b + c = 25	-
	(ii) Let, $A = \begin{pmatrix} 100 & 10 & 1 \\ 400 & 20 & 1 \\ 900 & 30 & 1 \end{pmatrix}$; $X = \begin{pmatrix} a \\ b \\ c \end{pmatrix}$; $B = \begin{pmatrix} 16 \\ 22 \\ 25 \end{pmatrix}$	1/2
	Then, the system becomes, $AX = B$	
	A = 100(-10) - 400(-20) + 900(-10)	
	$= -1000 + 8000 - 9000$ $= -2000 \neq 0$	1/2
	200070	
	Now, $adjA = \begin{pmatrix} -10 & 500 & -6000 \\ 20 & -800 & 6000 \\ -10 & 300 & -2000 \end{pmatrix}^{T} = \begin{pmatrix} -10 & 20 & -10 \\ 500 & -800 & 300 \\ -6000 & 6000 & -2000 \end{pmatrix}$	1
	Therefore, $A^{-1} = \frac{1}{ A } (adjA) = \frac{1}{-2000} \begin{pmatrix} -10 & 20 & -10 \\ 500 & -800 & 300 \\ -6000 & 6000 & -2000 \end{pmatrix}$	1/2

	Then, $X = A^{-1}B = \frac{1}{-2000} \begin{pmatrix} -10 & 20 & -10 \\ 500 & -800 & 300 \\ -6000 & 6000 & -2000 \end{pmatrix} \begin{pmatrix} 16 \\ 22 \\ 25 \end{pmatrix}$ $= \frac{1}{-2000} \begin{pmatrix} 30 \\ -2100 \\ -14000 \end{pmatrix}$ $= \begin{pmatrix} -\frac{3}{200} \\ \frac{21}{20} \\ 7 \end{pmatrix}$ Therefore, $a = -\frac{3}{200}$, $b = \frac{21}{20}$, $c = 7$.	1½
34.	Let us consider demand function be $p = D(x) = ax + b$ (i)	
	When $x = 25$ then $p = 20000$	
	From equation (i) , we have $20000 = 25a + b$ (ii)	1/2
	And when $x = 125$ then $p = 15000$	
	From equation (i) , we have $15000 = 125a + b$ (ii)	1/2
	On solving equations (i) and (ii), we get $a = -50$ and $b = 21250$	1
	Therefore, demand function, $p = D(x) = -50x + 21250$	1/2
	For equilibrium point $D(x_0) = S(x_0)$	
	$\Rightarrow -50x_0 + 21250 = 100x_0 + 7000$	
	$\Rightarrow -150x_0 = -14250$	
	$\Rightarrow x_0 = 95$	1/2
	On putting value of x_0 in demand function and supply function, we get	
	$p_0 = 16500$	1/2

	∴ Consumer surplus (CS)	
	$=\int_0^{x_0} D(x)dx - p_0 x_0$	
	$= \int_0^{95} \left(-50x + 21250 \right) dx - 16500 \times 95$	1
	$= \left(-50\frac{x^2}{2} + 2150x\right)_0^{95} - 1567500$	
	= 1793125 - 1567500	
	=₹ 225625	1/2
35.	Amount needed after 4 years	
	= Replacement Cost - Salvage Cost = ₹ (55,200 – 72 00) = ₹ 48,000	1
	The payments into sinking fund consisting of 10 annual payments at the rate 7% per	
	year is given by	
	$A = RS_{\overrightarrow{n} i} = R\left[\frac{\left(1+i\right)^n - 1}{i}\right]$	
	$\Rightarrow 48000 = R \left[\frac{\left(1 + 0.07\right)^4 - 1}{0.07} \right] = R \left[\frac{\left(1.07\right)^4 - 1}{0.07} \right]$	
	$\Rightarrow R = \frac{48000}{4.4385} = ₹10814.5$	2
	Amount of Annual Depreciation $=$ $\frac{36000-7200}{4}$ $=$ $\frac{28800}{4}$ $=$ ₹7200	1
	and rate of Depreciation = $\frac{7200}{36000 - 7200} \times 100 = 25\%$	1

Section -E

[This section comprises solution of 3 case- study/passage-based questions of 4 marks each with two sub parts. Solution of the first two case study questions have three sub parts (i),(ii),(iii) of marks 1,1,2 respectively. Solution of the third case study question has two sub parts of 2 marks each.]

36.	(i) For all values of $x, y = x^2 + 7$	
	∴ Shivam's position at any point of x will be $(x, x^2 + 7)$	
	The measure of the distance between Shivam and Manita, i.e., D	
	$D = \sqrt{(x-3)^2 + (x^2 + 7 - 7)^2} = \sqrt{(x-3)^2 + x^4}$	1/2 + 1/2
	(ii) We have,	
	$D = \sqrt{\left(x-3\right)^2 + x^4}$	
	Let $\Delta = D^2 = (x-3)^2 + x^4$	
	Now,	
	$\frac{d}{dx}(\Delta) = 2(x-3) + 4x^3 = 4x^3 + 2x - 6$	1/2
	$\frac{d}{dx}(\Delta) = 0 \Rightarrow x = 1$	1/2
	(iii) (a): $\Delta''(x) = 8x^2 + 2$	
	Clearly, $\Delta''(x) = 8x^2 + 2 > 0$ at $x = 1$	1
	\therefore Value of x for which D will be minimum is 1.	
	For $x = 1, y = 8$.	
	Therefore, required distance = $D = \sqrt{(1-3)^2 + (1)^4} = \sqrt{4+1} = \sqrt{5}$	1
	OR	
	(iii) (b): $\Delta''(x) = 8x^2 + 2$	
	Clearly, $\Delta''(x) = 8x^2 + 2 > 0$ at $x = 1$	1
	\therefore Value of x for which D will be minimum is 1.	
	For $x = 1, y = 8$.	1
	Thus, the required position for Shivam is $(1,8)$ when he is closest to Manita.	
37.	(i) Here, time = 25 years	
	∴ Total number of payments = 25×12 = 300R = 9% per annum.	1/2
	Rate of interest per month = $\frac{9}{1200}$ = 0.0075	1/2
	(ii) (a) Cost of house = ₹2500000 Down Payment = ₹500000	

	∴ Principal amount = ₹(2500000 – 500000)	
	=₹2000000	1/2
	EMI (using <i>reducing balance method</i>) = $\frac{P \times i}{1 - (1 + i)^{-n}}$	
	_ 2000000×0.0075	1
	$=\frac{2000000\times0.0075}{1-\left(1+0.0075\right)^{-300}}$	•
	$=\frac{15000}{1-\left(1.0075\right)^{-300}}$	
	$=\frac{15000}{1-(0.1062)}$	
	$=\frac{15000}{0.8938}=16782.27$	1/2
	Hence, monthly payment is ₹16782.27 OR	
	(ii) (b) Cost of house = ₹2500000	
	Down Payment =₹500000 ∴ Principal amount =₹(2500000 – 500000)	
	=₹2000000	1/2
	EMI (using <i>flat rate method</i>) = $P\left(i + \frac{1}{n}\right)$	
	$=2000000 \left(0.0075 + \frac{1}{300}\right) = 2000000 \left(0.0108333\right)$	1/2
	= ₹21666.66	/2
	 (iii) EMI (using reducing balance method) = ₹16782.27 ∴ Total interest = n×EMI - P 	
	$=300\times16782.27-2000000$	1/3
	= 3034681	1/:
	Hence, total interest is ₹3034681 When EMI is calculated by (using <i>flat rate method</i>), then	
	Total interest = $n \times EMI - P = 300 \times 21666.6 - 2000000$	1/2
	= ₹4499980	1/2
88.	(i) Let the factory <i>P</i> supply <i>x</i> units per week to depot A and <i>y</i> units to depot B	
	so that it supplies $8-x-y$ units to depot C . Obviously $0 \le x \le 5, 0 \le y \le 5, 0 \le 8-x-y \le 4$.	
	The given data can be represented diagrammatically as:	
	g a construction of the contraction of the contract	

Thus, total transportation cost (in ₹)

$$= 160x + 100y + 150(8 - x - y) + 100(5 - x) + 120(5 - y) + 100(x + y - 4) = 10(x - 7y + 190).$$

Hence the given problem can be formulated as an L.P.P as:

Minimize Z = 10(x - 7y + 190)

subject to the constraints

$$x + y \ge 4$$
,

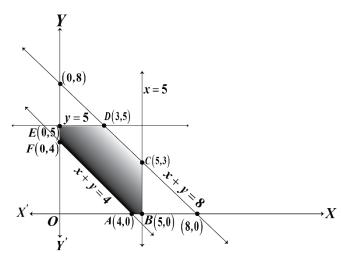

$$x + y \leq 8$$
,

$$x \leq 5$$
,

$$y \le 5$$

$$x \ge 0, y \ge 0$$

(ii) The feasible region corresponding to these in equations is shown shaded in the figure given below.

1

1

1

Corner Points	Value of $Z = 10(x - 7y + 190)$
A (4,0)	1940
B (5,0)	1950
C (5,3)	1740
D (3,5)	1580
E (0,5)	1550 →Minimum
F (0,3)	1690

We observe that Z is minimum at point E(0, 5) and minimum value is $\mathbf{\xi}$ 1550.

Hence x = 0, y = 5. Thus for minimum transportation cost, factory P should supply 0, 5, 3 units to depots **A**, **B**, **C** respectively and factory **Q** should supply 5, 0, 1 units respectively to depots **A**, **B**, **C**.

1

SAMPLE QUESTION PAPER (2024 - 25)

CLASS- XII

SUBJECT: Applied Mathematics (241)

Time: 3 Hours. Maximum Marks: 80

General Instructions:

Read the following instructions very carefully and strictly follow them:

- This Question paper contains 38 questions. All questions are compulsory. (i)
- (ii) This Question paper is divided into **five** Sections - A, B, C, D and E.
- (iii) In Section A, Questions no. 1 to 18 are multiple choice questions (MCQs) and Questions no. 19 and 20 are Assertion-Reason based questions of 1 mark each.
- (iv) In Section B, Questions no. 21 to 25 are Very Short Answer (VSA)-type questions, carrying 2 marks each.
- In Section C, Questions no. 26 to 31 are Short Answer (SA)-type questions, carrying 3 marks (v) each.
- (vi) In Section D, Questions no. 32 to 35 are Long Answer (LA)-type questions, carrying 5 marks each.
- (vii) In Section E, Questions no. 36 to 38 are case study-based questions carrying 4 marks each.
- (viii) There is no overall choice. However, an internal choice has been provided in 2 questions in Section B, 2 questions in Section C, 2 questions in Section D and one sub-part each in 2 questions of Section E.
- Use of calculators is **not** allowed. (ix)

 $\boxed{1 \times 20 = 20}$ **SECTION-A**

(This section comprises of multiple-choice questions (MCQs) of 1 mark each)

Select the correct option (Question 1 - Question 18):

Q.1. The area (in sq units) bounded by the curve $y = \sqrt{x}$, the x-axis, x = 1 and x = 4 is

 $(A)^{\frac{11}{3}}$

- (B) $\frac{1}{4}$ (C) $\frac{14}{3}$
- (D) $\frac{13}{3}$
- Q.2. Sampling which provides for a known non-zero equal chance of selection is
 - (A) Systematic sampling

(B) Convenience sampling

(C) Quota sampling

- (D) Purposive sampling
- Q.3. Let the cost function for a manufacturer is given by $C(x) = \frac{x^3}{3} x^2 + 2x$ (In rupees)

Which of the following statement is correct based on the above information?

- (A) The marginal cost decreases from 0 to 1 and then increases onwards.
- (B) The marginal cost increases from 0 to 1 and then decreases onwards.
- (C) Marginal cost decreases as production level increases from zero.
- (D) Marginal cost increases as production level increases from zero.
- Q.4. The absolute minimum value of the function $f(x) = 4x \frac{1}{2}x^2$ in the interval $\left[-2, \frac{9}{2}\right]$ is:
 - (A) 8

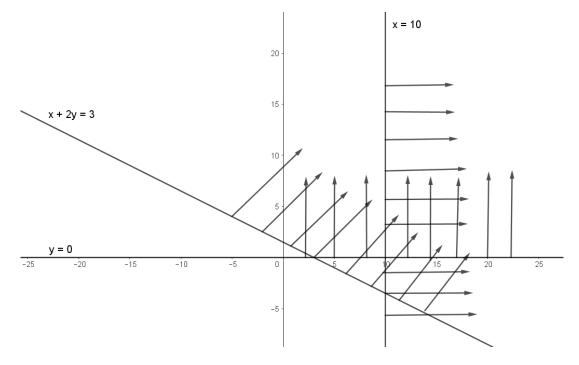

(B) -9

- (C) -10
- (D) -16
- Q.5. For the purpose of t test of significance, a random sample of size (n)2025 is drawn from a normal population, then the degree of freedom (v) is
 - (A) 2025²⁰²⁵

(B) 2024²⁰²⁵

- (C) 2025
- (D) 2024
- **Q.6.** The constraints of a linear programming problem along with their graphs is shown below:

$$x + 2y \ge 3$$
, $x \ge 10$, $y \ge 0$

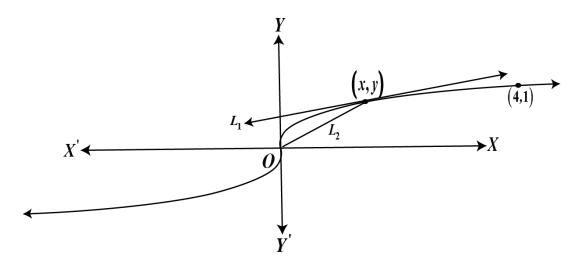

Which of the following inequality may be removed so that the feasible region remains the same in above graph?

- $(A) x + 2y \ge 3$
- (B) $x \ge 10$
- $(C) y \ge 0$
- (D) $x \ge 0$
- Q.7. A player rolls one fair die. If the die shows an odd number, the player wins the value that appears on the die, else loses half the value that appears on it. The expected gain of the player is
 - $(A) \frac{1}{2}$

(B) **0**

- (C) $\frac{1}{2}$
- (D) 1

	. The original cost of a ma			
	life of 3 years is ₹300000, t			
	(A) ₹100000	(B) ₹250000	(C) ₹ 600000	(D) ₹800000
Q.9	. A fish jumps out of the w	ater surface and follows the	e parabolic path $y = 6$	$6x - x^2 - 8; \ 2 \le x \le 4$.
	The fish reaches the highes	st height in its path at $(3,1)$	The slope of the par	th of the fish at
	(3,1) is			
	(A) 0	(B) 1	(C) 2	(D) 3
Q.1	$oldsymbol{0.}$ In a large consignment o	f electric bulbs 5% of a bat	ch of batteries are de	efective. A random
	sample of 80 is taken for in	spection with replacement.	Then the Variance o	f the number of
	defectives in the sample, is			
	$(A)\frac{18}{5}$	(B) $\frac{19}{5}$	(C) 4.555	(D) 8
Q.1	1. If it is currently 6:00 pm i	in 12 hours clock then what	will be the time after	375 hours?
	(A) 6 am	(B) 6 pm	(C) 9 am	(D) 9 pm
Q.1	2. The values of $\frac{1}{x}$ for the g	iven values of $x \in (-1,3)$ –	{0} is	
	$(A)\left(-1,\frac{1}{3}\right)\cup(3,\infty)$	(B) $(-\infty, -1) \cup \left(\frac{1}{3}, \infty\right)$	(C) $\left(-\frac{1}{3},1\right)$	(D) $\left(-\frac{1}{3}, -1\right)$
Q.1	3. The component of a time	series attached to long term	m variations is terme	d as
	(A) Seasonal variations		(B) Irregular variation	ons
	(C) Secular trend variations	3	(D) Cyclic variation	S
Q.1	4. The present value of a se	equence of payments of ₹ 8	300 made at the end	of every 6 month
	and continuing forever. If m	oney is worth 4% per annu	m compounded sem	i-annually, then the
	present value of the sequer	nce is:		
	(A) ₹ 20000	(B) ₹ 40000	(C) ₹ 60000	(D) ₹ 80000
Q.1	5. Shown below is a curve.			

 L_1 is the tangent to any point (x, y) on the curve.

 L_2 is the line that connects the point (x, y) to the origin.

The slope of L_1 is one third of the slope of L_2 .

Then the differential equation, using the given conditions is:

$$(A)\frac{dy}{dx} = \frac{y}{3x}$$

(B)
$$\frac{dy}{dx} = \frac{y}{x}$$

(C)
$$\frac{dy}{dx} = \frac{x}{3y}$$

(D)
$$\frac{dy}{dx} = \frac{3y}{x}$$

Q.16. For a 3×3 matrix if adj $A = 2A^{-1}$, find $|3AA^{T}|$

Q.17. For two matrices $P = \begin{bmatrix} 3 & 4 \\ -1 & 2 \\ 0 & 1 \end{bmatrix}$ & $Q^T = \begin{bmatrix} -1 & 2 & 1 \\ 1 & 2 & 3 \end{bmatrix}$; (where Q^T is the transpose of the matrix Q)

P - Q is:

(A)
$$\begin{bmatrix} 2 & 3 \\ -3 & 0 \\ 0 & -3 \end{bmatrix}$$

(B)
$$\begin{bmatrix} 4 & 3 \\ -3 & 0 \\ -1 & -2 \end{bmatrix}$$

(B)
$$\begin{bmatrix} 4 & 3 \\ -3 & 0 \\ -1 & -2 \end{bmatrix}$$
 (C) $\begin{bmatrix} 4 & 3 \\ 0 & -3 \\ -1 & -2 \end{bmatrix}$ (D) $\begin{bmatrix} 2 & 3 \\ 0 & -3 \\ 0 & -3 \end{bmatrix}$

(D)
$$\begin{bmatrix} 2 & 3 \\ 0 & -3 \\ 0 & -3 \end{bmatrix}$$

Q.18. The order and degree of a differential equation $\frac{d^2y}{dx^2} + \left(\frac{dy}{dx}\right)^4 + x^{\frac{1}{5}} = 0$; respectively, are

ASSERTION-REASON BASED QUESTIONS

(Questions number 19 and 20 are Assertion and Reason based questions carrying 1 mark each. Two statements are given, one labelled Assertion (A) and the other labelled Reason (R). Select the correct answer from the codes (A), (B), (C) and (D) as given below.)

$$[1 \times 2 = 2]$$

- (A) Both (A) and (R) are true and (R) is the correct explanation of (A).
- (B) Both (A) and (R) are true but (R) is not the correct explanation of (A).
- (C) (A) is true but (R) is false.
- (D) (A) is false but (R) is true.

Q.19. Assertion (A): The effective rate of interest equivalent to a nominal rate of 6% when compounded continuously is equal to $e^{0.06} - 1 = 6.18\%$.

Reason (R): The relation between effective rate (r_{eff}) of interest and nominal rate (r) of interest: $r_{eff} = e^r - 1$; where 'e' - Euler's number (approximate value is 2.71828), when compounded continuously.

Q.20. Assertion(A):
$$A = [a_{ij}] = \begin{bmatrix} m; i = j \\ 0; i \neq j \end{bmatrix}$$

where m is a scalar, is an identity matrix if m = 1

Reason (R): Every identity matrix is not a scalar matrix

SECTION B $[2 \times 5 = 10]$

(This section comprises of 5 very short answer (VSA) type questions of 2 marks each.)

Q.21. (a) In what ratio water must be added in milk costing ₹ 60 per litre, so that the resulting mixture would be of worth ₹ 50 per litre?

OR

- **Q.21.** (b) A pump can fill a tank with water in 2 hours. Because of leakage, it took $\frac{7}{3}$ hrs to fill the tank. How much time will it take for the leakage to drain all the water in the full tank?
- **Q.22.** In a 200 m race, A can give a start of 18 m to B and a start of 31 m to C. In a race of 350 m, how much start can B give to C?
- **Q.23.** A boat takes thrice as long to go upstream to a point as to return downstream to the starting point. If the speed of the stream is 5km/h, find the speed of the boat in still water.
- Q.24. (a) The incidence of occupational disease in an industry is such that the workers have a 20% chance of suffering from it. What is the probability that out of six workers 4 or more will catch the disease?

OR

- Q.24. (b) The lifetime of an item produced by a machine has a normal distribution with mean 12 months and standard deviation of 2 months. Find the probability of an item produced by this machine will last
 - (i) less than 7 months
 - (ii) between 7 and 14 months.

(Given
$$P(Z < \frac{5}{2}) = 0.9938$$
 and $P(Z < 1) = 0.8413$)

Q.25. If $A = \begin{bmatrix} \alpha & 0 \\ 1 & 1 \end{bmatrix}$ and $B = \begin{bmatrix} 1 & 0 \\ 5 & 1 \end{bmatrix}$, then find the value of α (if exists) for which $A^2 = B$.

SECTION C

$$[3\times6=18]$$

(This section comprises of 6 short answer (SA) type questions of 3 marks each.)

- **Q.26.** Find the remainder when 5^{61} is divided by 7.
- **Q.27.** (a) Two batches of the same product are tested for their mean life. Assuming that, the lives of the product follow a normal distribution with an unknown variance; test the hypothesis that the mean life is the same for both the branches, given the following information:

Batch	Sample Size	Mean life (in hours)	Standard Deviation (in hours)
Batch I	10	750	12
Batch II	8	820	14

Given
$$\sqrt{4.4444} = 2.1081$$
 and $t_{16}(0.05) = 2.120$

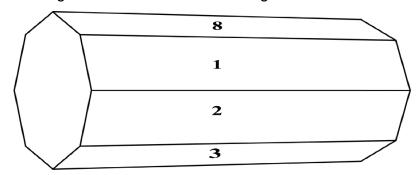

OR

- **Q.27.** (b) The manufacturer of electrical items makes bulbs and claims that these bulbs have a mean life of 25 months. The life in months of a random sample of 6 such bulbs are given to be 24, 26, 30, 20, 20 and 18. Test the validity of the manufacturer's claim at 1% level of significance. [Given $t_5(0.01) = 4.032$]
- **Q.28.** A traffic engineer records the number of bicycle riders that use a particular cycle track. He records that an average of 3.2 bicycle riders use the cycle track every hour. Given that the number of bicycles that use the cycle track follow a Poisson distribution, what is the probability that 2 or less bicycle riders will use the cycle track within an hour? Also find the mean expectation and variance for the random variable. (Given $e^{-3.2} = 0.041$)
- Q.29. Mr Rohit invested ₹ 5000 in a fund at the beginning of year 2021 and by the end of year 2021 his investment was worth ₹ 9000. Next year market crashed and he lost ₹ 3000 and ending up with ₹ 6000 at the end of year 2022. Next year i.e. 2023 he gained ₹ 4500 and ending up with ₹ 10500 at the end of the year. Find CAGR (Compounded Annual Growth Rate) of his investment. (Use(2.1)^{1/3} = 1.2805)
- Q.30.A small firm manufactures necklaces and bracelets. The total number of necklaces and bracelets that it can handle per day is at most 25. It takes one hour to make a bracelet and half

an hour to make a necklace. The maximum number of hours available per day is **14**. If the profit on a necklace is ₹ **100** and that on a bracelet is ₹ **300**, formulate an **L.P.P**. for finding how many of each should be produced daily to maximize the profit? It is being given that at least one of each must be produced.

(Note: No need to find the feasible region and optimal solution)

Q.31.(a) An octagonal prism is a three-dimensional polyhedron bounded by two octagonal bases and eight rectangular side faces. It has 24 edges and 16 vertices.

The prism is rolled along the rectangular faces and number on the bottom face (touching the ground) is noted. Let X denotes the number obtained on the bottom face and the following table gives the probability distribution of X.

<i>X</i> :	1	2	3	4	5	6	7	8
P(X):	p	2 <i>p</i>	2 <i>p</i>	p	2 <i>p</i>	p^2	$2p^2$	$7p^2+p$

On the above context, answer the following questions.

- (i) Find the value of p.
- (ii) Find the mean, E(X).

OR

Q.31.(b) If the probability of success in a single trial is 0.01, how many minimum number of Bernoulli trials must be performed in order that the probability of at least one success is $\frac{1}{2}$ or more? (Use $\log_{10} 2 = 0.3010$ and $\log_{10} 99 = 1.9956$)

SECTION D
$$[5 \times 4 = 20]$$
 (This section comprises of 4 long answer (LA) type questions of 5 marks each)

Q.32. (a) Fit a straight-line trend by using the method of least squares for the following data and calculate the trend values.

Year	Production (in tonnes)
1962	2
1963	4
1964	3
1965	4
1966	4
1967	2
1968	4
1969	9
1970	7
1971	10
1972	8

OR

Q.32. (b) The quarterly profits of a small-scale industry (₹ in thousands) are as follows.

Year	Quarter 1	Quarter 2	Quarter 3	Quarter 4
2020	39	47	20	56
2021	68	59	66	72
2022	88	60	60	67

Calculate **4-quarterly** moving averages.

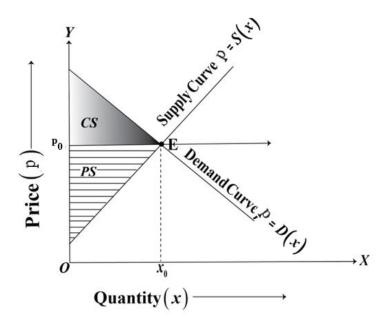

Q.33. (a) An owl was sitting at (0,k); k>0. Then it starts flying along the path whose equation is given by $y=ax^2+bx+c$, where $a\in\mathbb{R}-\{0\}$, $b,c\in\mathbb{R}$. It passes through the points (1,2),(2,1) and (4,5). Using **Cramer's Rule**, find the values of a,b,c and hence k

OR

Q.33. (b) A toy rocket is fired, from a platform, vertically into the air, its height above the ground after t seconds is given by $s(t) = at^2 + bt + c$, where $a, b, c \in \mathbb{R}$; $a \neq 0$ and s(t) is measured in

metres. After 10 second, the rocket is 16 m above the ground; after 20 seconds, 22 m; after 30 seconds, 25 m.

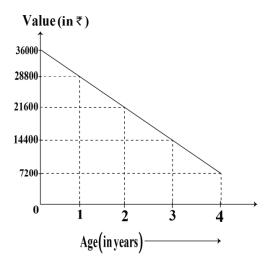

- (i) Write down a system of three linear equations in terms of a,b and c.
- (ii) Hence find the values of a,b and c, using matrix method.
- **Q.34.** Supply and demand curves of a tyre manufacturer company is given below:

The above graph showing the demand and supply curves of a tyre manufacturer company which are linear. 'ABC' tyre manufacturer sold **25** units every month when the price of a tyre was **₹ 20000** per units and 'ABC' tyre manufacturer sold **125** units every month when the price dropped to **₹ 15000** per unit. When the price was **₹ 25000** per unit, **180** tyres were available per month for sale and when the price was only **₹ 15000** per unit, **80** tyres remained. Find the demand function. Also find the consumer surplus if the supply function is given to be S(x) = 100 x + 7000

Q.35. In 4 years, a mobile costing ₹ 36,000 will have a salvage value of ₹ 7200.

The following graph shows the depreciation of a mobile's value over 4 years.

A new mobile at that time (i.e., after **4 years**) is expected to cost for ₹ **55,200**. In order to provide funds for the difference between the replacement cost and the salvage cost, a sinking

fund is set up into which equal payments are placed at the end of each year. If the fund earns interest at the rate 7% compounded annually, how much should each payment be? Also find the amount of Annual Depreciation of the mobile's value over **4** years and find the rate of depreciation (under straight line method). Use $(1.07)^4 = 1.3107$.

$\underline{\mathsf{SECTION-E}} \qquad \qquad \left[4 \times 3 = 12 \right]$

(This section comprises of 3 case-study/passage-based questions of 4 marks each with sub parts. The first two case study questions have three sub parts (i), (ii), (iii) of marks 1, 1, 2 respectively. The third case study question has two sub parts of 2 marks each)

Case Study-1

Q.36. A student Shivam is running on a playground along the curve given by $y = x^2 + 7$. Another student Manita standing at point (3, 7) on playground wants to hit Shivam by paper ball when Shivam is nearest to Manita.

Based on above information, answer the following questions:

- (i) Let at any instant while running along the curve $y = x^2 + 7$, Shivam's position be (x, y). Find the expression for the distance (D) between Shivam and Manita in terms of 'x'. [1]
- (ii) Find the critical point(s) of the distance function. [1]
- (iii) (a) What is the distance between Shivam and Manita when they are at least distance from each other. [2]

OR

(iii) (b) Find the position of Shivam, when he is closest to Manita.

Case Study-2

Q.37. EQUATED MONTHLY INSTALMENTS (EMI): -

Each instalment can be considered as consisting of two parts:

(i) Interest on the outstanding loan

(ii) Repayment of part of the loan.

Methods of calculation of EMI or Instalment: -

EMI or Installment can be calculated by two methods:

- 1. Flat Rate Method
- 2. Reducing-balance method or Amortization of Loan

[2]

Rajesh purchased a house from a company for ₹2500000 and made a down payment of ₹500000 He repays the balance in 25 years by monthly instalments at the rate of 9% per annum compounded monthly. $\left(\text{Given}(1.0075)^{-300} = 0.1062\right)$

Based on the above information, answer the following questions:

- (i) Find the number of payments and find the rate of interest per month. [1]
- (ii) (a) What are the monthly payments of instalments using *reducing balance method*? [2]

OR

- (ii) (b) What are the monthly payments of instalments using *flat rate method*? [2]
- (iii) What is the total interest payment made in the process applied to calculate **EMI** in the above part (37(ii))?

Case Study- 3

Q.38. A company has two factories located at P and Q and has three depots situated at A, B and
C. The weekly requirement of the depots at A, B and C is respectively 5, 5 and 4 units, while the production capacity of the factories P and. Q are respectively 8 and 6 units. The cost (in ₹) of transportation per unit is given below.

Cost(in₹)				
To B C				
P	160	100	150	
Q	100	120	100	

Based on the above information, answer the following questions:

- (i) Formulate the objective function and the constraints of the above Linear programming problem. [2]
- (ii) How many units should be transported from each factory to each depot in order that the transportation cost is minimum? [2]
